Regular Expression Validation

10 points

Create a form similar to the one we created in class to validate the following fields using regular expressions.

(2 points each)

- MSTC Stevens-Point room numbers (assume they are 3-digits followed by an optional capital letter)
- MSTC Course Number (see the number under the title above)
- MSTC Student ID number
- MSTC Student Email address

Be sure to ask questions if you require clarification of the requirements.

(2 points)

Search the web for useful regular expression that we have not demonstrated in class or this assignment (no SSN either). Add a field to your form to test the expression. (1 bonus point if you find one that no one else finds).
