Unit 2 HTML Basics

10 points

For the next few assignments you will be creating Help pages for <u>one</u> of your Programming Logic – Intermediate programs (Assignment Tracker, DVD database, etc). If you no longer have the program, ask me—I probably still have a copy.

Use the following Help system as an example:
http://instructor.mstc.edu/instructor/vgaul/Attendance%20Tracker%20Help/index.htm

Alternate: If you have a web site that you'd like to develop for an organization or yourself, check with me to see if the site could meet my requirements. If the site needs a database, save it for Web Data Management.

This first portion of the assignment will demonstrate your basic HTML skills. **No formatting is required** (styles) but you may add formatting if you wish. You may have to replace in the Unit 3 assignment.

This must include the following to must demonstrate the following HTML competencies:
- ❒ Since this is the primary page of your web site, be sure to give it the appropriate name.
- ❒ A folder to hold the page and images used on the page.
- ❒ All components of the <head> tag designated in class
- ❒ One comment
- ❒ Headings
- ❒ Two paragraphs describing how to use features on the page.
  (After the Unit 5 assignment, your web site must include complete documentation so consider adding more than two paragraphs now)
- ❒ Line break
- ❒ One bold element
- ❒ One italics element
- ❒ One element that is both bold and italics
- ❒ Image
  - ❒ For all images, include a height and width designation that matches the actual size of the image
- ❒ Horizontal rule
- ❒ Unordered list
- ❒ Ordered list
- ❒ Special character other than a non-breaking space
- ❒ Special character from http://www.chami.com/tips/internet/050798I.html that is not included in the course notes

You may add the words *at least* to all the bullets above. You may include more components in your web page, but you must incorporate them correctly. You web page must validate using the W3C HTML5 Validator.
