

Web Programming

152-150

Creating Websites

15 points

Expand the *website* you created for Unit 2 and 3.

Include (at least) two more pages to the site. These pages must contain content that is relevant to the site (related content). However, one of the pages can be a *about the programmer* page that provides a brief bio about you.

Somewhere on the pages, you must demonstrate the following HTML competencies:

- ☐ contains a home page (index.html) and two additional pages,
(If you include more than these three pages, I will NOT grade all your pages. Email me when you submit the assignment and tell me which **three** pages to grade.)
- ☐ contains a folder to hold all the site images,
- ☐ contains a folder to hold all the site pages except the home page.

- ☐ each page contains links to the other pages
- ☐ contains at least two bookmarks (on-page links) and links to them.
- ☐ contains at least one link to a bookmark on another page within the site.
- ☐ contains at least one link to another website.
- ☐ contains at least one link to a bookmark on a page in another site.
(Hint: My website has lots of pages with bookmarks)
- ☐ contains at least one thumbnail image that links to a larger version of the picture.
- ☐ contains at least one image link (with no borders) other than the thumbnail link.
- ☐ contains at least one link with a **title** attribute.
- ☐ contains at least one link that opens in a new window (not counting the thumbnail link)
- ☐ contains at least one Email link.
 - o Do not use a *harvest proof* Email. Use an actual Email link.

Extra Credit (2 points)

- ☐ Link your main Help page to your C#/VB project.
 - ☐ Add a status bar to your project (if it doesn't already have one).
 - ☐ Add a Help icon to the status bar.
 - ☐ Link the Help icon to the main page of your help system.
